SUMMARY

Backend-focused Full-Stack Software Engineer with 6+ months of hands-on experience building scalable RESTful APIs, developing production-grade microservices, and working on system design using Python and FastAPI. Delivered measurable results: **40% reduction in API latency and 35% drop in invalid requests** across 5+ production deployments. Eager to grow in backend engineering, with a strong interest in scalable systems and high-performance backends.

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL
Frameworks & Libraries	FastAPI, React, Node.js, REST API Architecture, Pandas, NumPy
Databases	MySQL, Query Optimization, Database Schema Design, ACID Transactions, Data Modeling
DevOps & Tools	Git/GitHub, CI/CD Pipelines, Linux, Postman, Automation
Core Concepts	Data Structures & Algorithms, OOP, System Design, REST Principles

PROFESSIONAL EXPERIENCE

Junior Software Engineer · **Kloud Win Solutions Pvt** , Bangalore Jan 2026 – Present

- ▶ **Built and shipped 5+ RESTful APIs** using FastAPI with request routing, validation middleware, and error handling — maintaining **stable uptime and 80%+ test coverage** across active users.
- ▶ **Improved MySQL performance** through indexing and schema refactoring, **cutting P95 latency by 40%** (800ms → 480ms).
- ▶ **Implemented ACID-compliant CRUD operations** with automated request validation, **reducing invalid requests by 35%** and debug overhead by 25%.
- ▶ **Set up GitHub Actions workflows** to automate testing and deployment pipelines, reducing manual release effort and ensuring consistent builds across environments.

Frontend Developer — Intern · **Think Champ** , Tirupathi

- ▶ **Integrated RESTful APIs** into responsive JS interfaces, enabling real-time data rendering across **3+ internal dashboards** and cutting manual data handling by 40%.
- ▶ **Delivered 10+ production UI screens** from Figma mockups; optimized asset delivery via code splitting, **improving page load by 30%**.

ENGINEERING PROJECTS

Google Business Profile AI Suite

Next.js 14 · FastAPI · MongoDB · OpenAI GPT-4o · Google Business Profile API · Docker · GitHub Actions

- **Built a scalable microservices setup** — FastAPI backend, dedicated GPT-4o LLM service, and Next.js 14 frontend — with independent deployability, OAuth 2.0, and HTTP-only cookie session management.
- **Developed a real-time AI review reply engine** using GPT-4o with SSE streaming and a custom prompt engineering framework; implemented a **weighted audit scoring algorithm** (completeness, freshness, photo quality, response rate) to surface ranked SEO insights.
- **Set up a MongoDB caching layer** with a background data-merging strategy to cut repeat-user latency; containerized the stack with Docker and automated deployments via **GitHub Actions CI/CD**.

Workload Orchestration & Carbon Optimization Engine

Python · LSTM · XGBoost · Kubernetes · Docker

- **Built a microservice-based workload scheduler** using LSTM + XGBoost to predict energy demand and availability with **92% accuracy across 50+ test scenarios**; deployed across a **10+ node cluster with 98% uptime** and automated carbon-intensity-driven scaling.
- **Implemented a Reinforcement Learning module** to optimize resource allocation, reducing projected data center carbon emissions by 35% while maintaining SLA compliance.

EDUCATION

B.Tech — Computer Science (Cloud Computing Specialization)

CGPA: 7.99 / 10

Siddharth Institute of Engineering and Technology, Puttur · Expected June 2026
